Introduction to CeramGloss™ floor maintenance system

The CeramGloss™ floor maintenance system includes an innovative new coating for stone and vinyl flooring.

Made from a durable, glass-like material, it is ideal for high-traffic locations such as:

- Supermarkets
- Showrooms
- Medical facilities
- Education facilities
- Shopping centres

CeramGloss™ is an excellent floor **enhancement** and **protection** solution. **Resistant to UV, chemicals, oil and water**, it does not require regular stripping and re-applying.

It **requires less maintenance than polishing** due to the extremely durable gloss finish, significantly reducing cost.

Developed in Japan by Kyushu Hi-Tech, a leader in cutting edge floor coating technology, CeramGloss™ enhances the floors of hundreds of shopping malls run by Japan's largest operators.

With maintenance intervals significantly reduced, there is **less waste and less power and product** being used, making CeramGloss™ the **eco-friendly** choice for the environment.

Superior Japanese technology

One of the latest advances in flooring maintenance, CeramGloss™ is made from a combination of alkoxy silane and silicate. **Application is straightforward and the drying time is fast.**

With vinyl flooring, the final gloss layer is applied the second day and is dry to walk on in approximately one hour. It can be used to **increase the durability and gloss of new floors** and to **restore existing stone and vinyl floors**, including those with wax coatings.

Since its 2007 release in Japan, the demand for the durability and finish of CeramGloss™ has been high. International interest has resulted in the product being extensively used in China and Taiwan.

The CeramGloss™ difference

- **Long lasting durability** – retains its finish longer
- **Less maintenance** – a simple gloss enhancer every 6 months - 5 years
- **Unparalleled shine** – deep glass-like finish
- **Minimum daily upkeep** – easy to sweep, mop or wash
- **Resistant** to acids, oil and water
- **Eco friendly** – significantly less waste than polishing
- **Simple application** – developed for safe handling and ease of use

Advantages comparison

	Polish	CeramGloss™
Quality	Dull finish (Easily scuffed)	High depth gloss (Ceramic resilience)
Gloss durability	Quickly deteriorates	Retains high gloss
	within weeks*	6 months – 5 years*
Chemical resistance	Poor resistance	Highly resistant
Daily cleaning	Frequent, detailed cleaning required	Significantly less cleaning
Environmental impact	Produces hazardous waste liquid	Negligible waste
Cost	Lower initial cost but high ongoing cost	Overall cost approximately 30% less*

Innovative Global Products

The solutions are all around us

Globally, new technology is emerging that enables exciting and revolutionary solutions to be found to problems facing industry and individuals. Many products and services are available to us to help make our lives happier, safer, more productive and meaningful.

We need to find better ways

Businesses, small and large, have the opportunity to be more efficient, make more money, and meet more customer needs, if they can find the right products and technology. Business success anywhere depends on being in touch with ways of doing things better.

The problem is proximity

Much of the smart technology, vastly more efficient products and tools, innovative solutions and money saving ideas are developed and sold overseas. Often they are not available locally.

North21's role is simple

North21 was established to bridge the proximity gap. We bring the latest products and ideas from overseas to local businesses. We form relationships in the global market and bring technologies within reach.

We are all about... **Innovative Global Products**
